Close gaps in Microsoft 365 Email Security with SendGuard for Outlook

Protect your company from the Risk of Confidential Information being emailed to the Wrong People.

Data leaks are most commonly caused by email, which is the easiest point of exposure. While Office 365 email security features have many strengths, they cannot fully mitigate all the threats facing an organization.

To **prevent misdirected emails** and enhance Microsoft's native defense, consider using **SendGuard- Standss Outbound Email Security Solution.**

Prevent Accidental Data Disclosure

Get users to review and confirm recipients and attachments before emails are sent out

Data Loss Prevention

Detect and warn sensitive or inappropriate content (personal data, credit card numbers etc) in emails and attachments

Unsend Emails even after clicking Send

Delay (non-urgent) emails for a minute to allow "recall" of sent emails

Reduce Reply-All Spam

Get users to review and confirm recipients when Reply-All is clicked (or block Reply-All's if too many recipients)

Encourage off-Email Resolution

Prompt users to call or use chat/Teams for emails with too many replies in the thread

Centrally Managed Settings

Use our Portal, Intune or GPO to deploy and manage settings. Settings can also be locked to prevent changes.
